the tri services jtagg ii engine uses two identical brush seals in tandem located aft of the high pressure compressor the engine operating conditions at intermediate rated power irp for this seal are estimated to be 50 000 rpm 899 ft sec speed 175 psid air to air pressure differential and 1200 deg f air temperature the testing was comprised of static air leakage performance seal offset rotor run out tests and a 50 hr endurance test in the nasa lewis seal rig based on the test results it is concluded that the brush seal design should be able to meet the air leakage flow factor goal of less than 0 004 for the engine irp operating conditions as a comparison a labyrinth seal in this location with a 0 005 in typical radial clearance has an estimated leakage flow factor of 0 007 the long term seal life can not be predicted accurately due to the limited endurance testing of 50 hr however based on the excellent condition of the test seal and rotor after 50 hr of testing it is anticipated that the seals should easily meet the jtagg ii engine test requirement

the finger seal is a revolutionary new technology in air to air sealing for secondary flow control and gas path sealing in gas turbine engines though the seal has been developed for gas turbines it can be easily used in any machinery where a high pressure air cavity has to be sealed from a low pressure air cavity for both static and rotating applications this seal has demonstrated air leakage considerably less than a conventional labyrinth seal and costs considerably less than a brush seal a low hysteresis finger seal design was successfully developed and tested in a seal rig at nasa glenn research center a total of thirteen configurations were tested to achieve the low hysteresis design the best design is a pressure balanced finger seal with higher stiffness fingers the low hysteresis seal design has undergone extensive rig testing to assess its hysteresis leakage performance and life capabilities the hysteresis performance and endurance test results are presented based on this extensive testing it is determined that the finger seal is ready for testing in an engine
